Professor,

We are sorry to inform that our paper for PES GM 2015 was rejected.  
Below are the comments from the only reviewer.  
Based on the comments, perhaps we can revise/improve and submit it to a difference conference.

Kyungwoo / Min

Subject: Submission 15PESGM2405 Rejected  
To: [kmin@utexas.edu](mailto:kmin@utexas.edu)

RE: Submission  
Submission ID: 15PESGM2405  
'Transient Signature Detection for Disaggregating Appliances in Households'  
Intelligent Grid Coordinating  
Primary Committee of the PESGM2015 Submission Site.

The reviewing committee has advised us that the conference paper that you submitted for the 2015 IEEE PES General Meeting has been rejected. The reason for rejection is enclosed.

Reviewer 1:  
Rating: 2-Fair  
Recommendation: Reject  
Comments: While the method may be interesting, the paper lacks discussion of how it could be implemented in the real world, pilots to figure that out or next steps. Current meters are not capable of providing the kind of information the method required.

We thank you for your continued interest in the Power & Energy Society.

Doug Houseman
